1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed (method of detection by hybridization using a nucleic acid labeled with the recited compound).
2. The specification is objected to because of the following informality: the continuation information must be updated to indicate issue of the parent '918 application as U.S. Patent No. 6,642,380.

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 11-13 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 11 is drawn to a method, but the scope cannot be determined because of a lack of typical connecting clause; i.e., "comprising" or "consisting of". It is unclear whether the scope is "open" or "closed". Further, the single recited step of "utilizing a nucleic acid labeled with a labeling substance" is insufficient to define a method, because it is unclear what action or actions would satisfy such language. Clarification is required.

4. Claims 11-13 have been amended to incorporate the patented fluorescent group-containing carbodiimide compound claimed in prior patent 6,642,380; thus, these claims are free of the prior art, but are rejected for other reasons. No claims are allowable.
